WORK EXPERIENCE

Balfour and Beatty (Work Experience)   (05/2018 - 05/2018)
Software and Hardware Management

Organized software deployments to multiple systems on the network. Organized Hardware deployments to multiple members around the company and across the country.

Work experience was brilliant, It taught me loads of new skills, and gave me the experience needed to get me prepared for the real world of work in the digital industry. These deployments allowed me to learn crucial information about certain network technologies and made me more disciplined in handling important data on such a large scale.

Drummond Central   (06/2021 - Present)
Frontend Developer

Working at Drummond Central I progressively improved my developing skills. I found myself enjoying my time working through creating and maintaining web applications and systems. I used .NET Core, ASP.NET with C#, MVC, SCSS, and Javascript/JQuery on a daily basis.

I have a vast amount of knowledge around the projects at Drummond Central when it comes to the Frontend aspectd leading to me being one of the main point of contact for our account handlers.

Developed Google Ads for clients like END and Greggs and optimized them for better performance.

Being involved in pre-development meetings enabled me to extend my knowledge and experience with software architecture, scoping out projects, estimating tasks, generating timelines and ensuring the team ran smoothly.

Through supporting the team with back end queries, I am developing my knowledge of REST API and Database managment, which I hope to continue in my next role.
